AdvancedWare is Pleased to Present AWmLaborTracking for Epicor Kinetic - \$8,500

AWmLaborTracking provides a very efficient way of handling Material Movements and Labor Tracking for your Epicor Kinetic system. With AWmLaborTracking, your company will be able to use a Wireless Mobile Device (or PC with scanner) to handle these transactions and your Epicor Kinetic system will automatically be updated in Real-Time.

AWmLaborTracking provides a simple graphical interface on the Wireless Device, which enables your employees to scan or enter information. With AWmLaborTracking, your information accuracy is much higher, and since all transactions are recorded in Real-Time, the system always reflects the correct status. Imagine the efficiencies gained in the Labor Tracking area by no longer having to fill out and manually key in paper time cards. Also, think about how streamlined your Material Movements will be when you no longer have to manually track each movement and then key it back into the system.

Our Turnkey Approach: For the price of \$8,500, AWmLaborTracking allows your company to perform the Material Movement and Labor Tracking functions in the Epicor Kinetic system in Real-Time using a Wireless Mobile Device (or PC with scanner). And best of all, AWmLaborTracking works with any release of Epicor Kinetic, even if you have customization.

To arrange for a demonstration or to order a copy of AWmLaborTracking please give us a call at (949) 609-1240
