

## AdvancedWare is Pleased to Present AWWebConfig for DataFlo - \$16,500

AWWebConfig will enable your company's Web site to process Real-Time Orders for Configured Products via the Web. With AWWebConfig your Customers, Distributors and Consumers will be purchasing your Configured Products on-line. In all cases, the process of configuring a product is Real-Time integrated with the DataFlo Configurator. When users (via the Web) select a Configured Product (i.e., setup in DataFlo as a product that goes through the configurator) then the page displayed in the Storefront gets its page information (options, configuration rules, pricing, etc.) all in Real-Time from the DataFlo configurator.

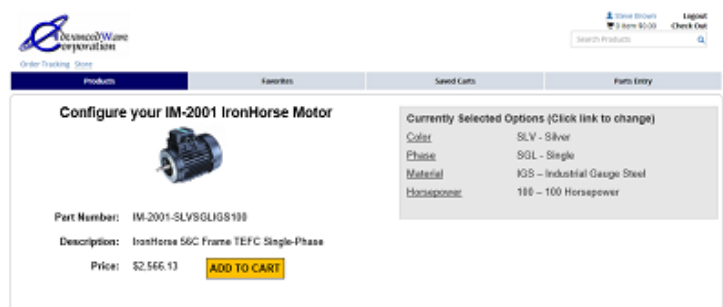

Example of User Configuring a product – everything is integrated with the DataFlo Configurator in Real-Time. For instance, if the user selects an option that changes the price or “turns on” or “turns off” other options, etc. then the Web Page will automatically do the same thing.

Cart View Example - The user can add other Configured or non-configured products and place the Order. The Order will be generated in Real-Time into DataFlo with all of the DataFlo business rules/logic executed.
