

AdvancedWare is Pleased to Present AWWebConfig for Epicor ERP 10 - \$16,500

AWWebConfig will enable your company's Web site to process Real-Time Orders for Configured Products via the Web. With AWWebConfig your Customers, Distributors and Consumers will be purchasing your Configured Products on-line. In all cases, the process of configuring a product is Real-Time integrated with the Epicor 10 Configurator. When users (via the Web) select a Configured Product (i.e., setup in Epicor 10 as a product that goes through the configurator) then the page displayed in the Storefront gets its page information (options, configuration rules, pricing, etc) all in Real-Time from the Epicor 10 configurator.

Example of user Configuring a product on page 1 of the configuration process. Note: the page 1 display can be re-named like in this example to "Hardware Options". Everything on the page below is integrated with the Epicor 10 Configurator in Real-Time. For instance, if the user selects an option that changes the price or "turns on" or "turns off" other options, etc. then the Web Page will automatically do the same thing.

Page 2 of the Configuration (re-named to "Software Options") is shown below. Once the Configuration is complete the user can add the Configured product to their Cart to purchase it. Note: The Cart view itself has the ability to click a Configured item to make any configuration changes.
